

Textual Analysis of ICALEPCS and IPAC Conference Proceedings

Revealing Research Trends, Topics, and Collaborations for Future Insights and Advanced Search

Antonin Sulc, Annika Eichler, Tim Wilksen
Cape Town,

Introduction

- > There are almost 19000 submissions on **IPAC** (15478, 2010 - 2023) and **ICALEPCS** (3375, 1999 - 2021).

Introduction

- > There are almost 19000 submissions on **IPAC** (15478, 2010 - 2023) and **ICALEPCS** (3375, 1999 - 2021).
- > Many of them are highly relevant to the community.

Introduction

- > There are almost 19000 submissions on **IPAC** (15478, 2010 - 2023) and **ICALEPCS** (3375, 1999 - 2021).
- > Many of them are highly relevant to the community.
- > It is really hard to understand the entire landscape.

Introduction

- There are almost 19000 submissions on **IPAC** (15478, 2010 - 2023) and **ICALEPCS** (3375, 1999 - 2021).
- Many of them are highly relevant to the community.
- It is really hard to understand the entire landscape.
- Searching through submissions is also a challenge.

Approach

1 Collected the PDFs from public sources (JACOW)

Space charge lenses use a confined electron cloud for the focusing of ion beams. The electron density gives the focusing strength whereas...

Topic Modeling

Citation graphs

Bipartite Graphs

Language Processing

Approach

- 1 Collected the PDFs from public sources (JACOW)
- 2 Extracted text with Pymupdf (can handle two page layout)

PyMuPDF

4 Document-word bipartite graph analysis

Search

Word2Vec

- > Each word (token) is represented by one vector.
- > Similar **words** have high cosine similarity. (*easy vs simple vs trivial*)
- > One vector per token.
- > Keyword search.

Search

Word2Vec

- > Each word (token) is represented by one vector.
- > Similar **words** have high cosine similarity. (*easy vs simple vs trivial*)
- > One vector per token.
- > Keyword search.

SimCSE

- > The entire text block is one vector.
- > Similar **texts** have high cosine similarity.
- > One vector per text block (abstract, paragraph).
- > Block search (abstract to abstract).

SimCSE

- > The entire text block is one vector.
- > Similar **texts** have high cosine similarity.
- > One vector per text block (abstract, paragraph).
- > Block search (abstract to abstract).

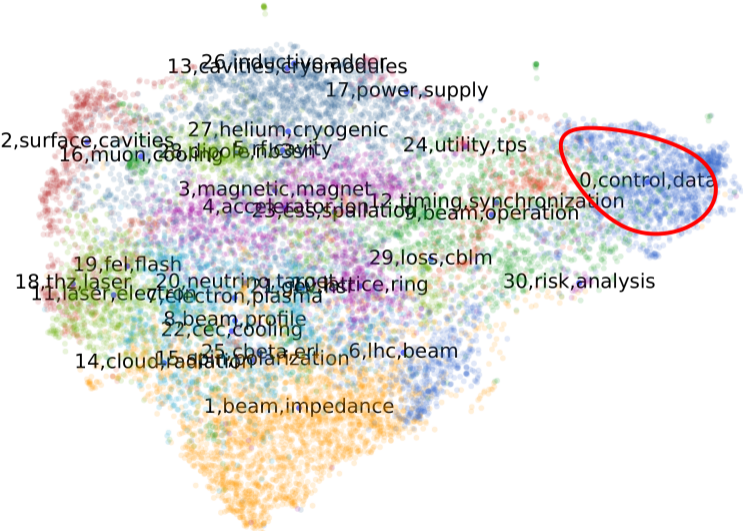

SimCSE Search Example

```
from sentence_transformers import SentenceTransformer
model = SentenceTransformer('TEXT_ICALEPCS/simcse')
texts = ["Biennial International Conference on. Accelerator and Large
Experimental Physics Control Systems", "ICALEPCS"]
e = model.encode(texts)
```

Topic Modeling - ICALEPCS

Topics over Time - ICALEPCS

Topics over Time - IPAC

Citation Graphs - Larger View

IPAC & ICALEPCS citations are too sparse, so we extended sources.

Closeness Centrality (nodes that most efficiently spread information):

Citation Graphs - Larger View

IPAC & ICALEPCS citations are too sparse, so we extended sources.

Closeness Centrality (nodes that most efficiently spread information):

- 1 W. Decking et al , “*Status of the European XFEL*”, IPAC’13

- 3 K. Ko and A. E. Candel, “*Advances in Parallel Electromagnetic Codes for Accelerator Science and Development*”, LINAC’10

Bipartite Graphs

It's about (maximal) coverage.

Degree Centrality (most connected nodes):

- 1 L. Medina et al , “*Cavity Control Modelling for SPS-to-LHC Beam Transfer Studies*”, IPAC'21
- 2 M. Chung et al , “*Transient Beam Loading Effects in Gas-filled RF Cavities for a Muon Collider*”, IPAC'13
- 3 K. Yonehara et al , “*R&D of a Gas-Filled RF Beam Profile Monitor for Intense Neutrino Beam Experiments*”, IPAC'17

Degree centralities: beam (0.07), cavity (0.05), bunch (0.05), rf (0.05), control (0.04), lhc (0.04), laser (0.04), cavities (0.04), fel (0.04), electron (0.04)

Future Work

- > We would like to **collect more sources** (arXiv, Inspire HEP).
- > Improve the **pre-processing** (equations, tables).
- > Feed the **LLM with data**, developing an AI assistant.
- > We are **fine-tuning an AI-assistant** based on our logbook.
- > Incorporating logbook data together with the community wisdom for better analysis and decisions for e.g.
 - Root Cause Analysis,
 - FAIR (Findable, Accessible, Interoperable, and Reusable)-ness
- > We already have some partial success.

Conclusion

- > Semantic search, topic modeling, and graph analysis can extract insights from past conferences.
- > Topic modeling revealed the evolution of research priorities and emerging trends for each conference over time.
- > Citation graph exposed influential papers based on connections to other papers.
- > Bipartite graph highlighted important concepts.

Thank you!
